^{2.} Citations and explanations (Rule 70.7)

[List of Documents] The following document was cited in the ISR.

1. JP, 2003-31219, A (Yuasa Corp.), January 31, 2003 (01.31.01), Claims 1-7, Paragraphs 0018-0025, etc. (Family: none)

[Explanation]

The inventions of claims 1-3 and 5-8 do not appear to be novel or involve an inventive step based on the descriptions in document 1. Document 1 (paragraph 0025) describes further including Zr in an LiMnNiCoO₂ positive electrode active substance. As document 1 suggests using a composite oxide equivalent to that in the present invention as a positive electrode active substance, it can be deduced the various properties of active material-derived substances, if measured, would naturally lead to equivalent conditions. Also, the capacity ratio between positive electrode and negative electrode includes at least the range of same capacity; therefore, such requirement is naturally fulfilled with any further specific consideration.

The novelty and inventive step of the invention of claim 4 cannot be refuted based on the descriptions in document 1. Document 1 describes adding Zr to a composite oxide. However, it does not suggest giving consideration to specific ratio, nor does it suggest the effects set forth in the specification from adopting such addition ratio.
